Sun, 20 May 2018 02:26:00 GMT - The theories developed in the early 20th century to integrate Mendelian genetics with Darwinian evolution are called the modern synthesis, a term introduced by Julian Huxley.. Evolutionary biologists have subsequently modified this concept, such as George C. Williams' gene-centric view of evolution.He proposed an evolutionary concept of the gene as a unit of natural selection with the ...

Sun, 20 May 2018 01:36:00 GMT - Depleted uranium is very dense; at 19,050 kg/m³, it is 1.67 times as dense as lead, only slightly less dense than tungsten and gold, and 84% as dense as osmium or iridium, which are the densest known substances under standard (i.e., Earth-surface) pressures. Consequently, a DU projectile of given mass has a smaller diameter than an equivalent lead projectile, with less aerodynamic drag and ...
