Thu, 21 Jun 2018 18:02:00 GMT - Alzheimer's disease acknowledged as progressive multifarious neurodegenerative disorder, is the leading cause of dementia in late adult life. Pathologically it is characterized by intracellular neurofibrillary tangles and extracellular amyloid protein deposits contributing to senile plaques.

A review on Alzheimer's disease pathophysiology and its ... -

Thu, 21 Jun 2018 14:41:00 GMT - Obviously diet is one of the most important, if not, the most important step in lowering glutamate. However, these may prove beneficial in helping those when experiencing a peak of symptoms related to high glutamate and neurological inflammation.

Lowering Glutamate & Protecting Against Glutamate Damage -

- Research Highlights Anti-apoptosis is mechanistically distinct from apoptosis. Anti-apoptosis processes are commonly observed in apoptotic resistant cells. Multiple physiological and genetic processes mediate anti-apoptosis and cell survival. Autophagy can sometimes prevent and sometimes initiate cell death. Pro-survival processes may serve to inhibit some forms of necrosis.
