Tue, 15 May 2018 20:40:00 GMT - In design practice, determination of the Euler critical load for such columns in the direction parallel to the lattices [2] [3][4][5] is based on the Engesser's hypothesis which reduces the problem to calculation of Euler's critical load for the "equivalent" solid pin-ended bar while the effect of shear deformation on the bar deflections is taken into account [6,7].

- what Terry refers to as the "art and design tradition" To rely on object-specific methods engages a field ranging from a pure craft orientation to the design tradition reflected in applied engineering and industrial design. In contrast, a general theory of design will support a rich, comprehensive understanding of the design process.
